For Immediate Release:

Cadorath and Airbus Helicopters Reinforce Partnership on D-Level Repair Centre Agreement

Cadorath is pleased to announce its entrance into the Approved repair Center Network for Airbus Helicopters and will perform D-Level single part repairs in support of Airbus Helicopters dynamic component repair.

Cadorath will be able to support Airbus customers and the approved repair network with the special processes required for return to service activities. In 2018, Cadorath began the qualifications for the special processes required to ensure that the highest standards of quality and safety are achieved with the repair and overhaul of critical parts. This will further secure safe and competitive repair and overhaul support for dynamic components.

Cadorath will continue to test and present innovative technologies and processes to repair more parts. With Cadorath as partner, Airbus Helicopters is willing to explore innovative processes to lower costs and secure availability for our customers.

“Becoming part of the Airbus approved repair network has been a collaboration of the incredible people at both Cadorath and Airbus” states David R. Haines – Chief Operating Officer at Cadorath. “We are excited to bring our many decades of expertise in the performance of Special Processes and dynamic component repair to the Airbus community.”

Cadorath will continue to support the light and intermediate model helicopters out of its facilities located in Winnipeg, Canada. In the future, Cadorath will add capabilities to provide support for the medium twin and heavy model helicopters.
