## **Cadorath Aerospace Expands Airbus Helicopters Repair Capabilities to Include H135 and H145 Platforms**

**Winnipeg, Manitoba - June 19, 2026** – Cadorath Aerospace continues to expand its advanced repair capabilities in Canada through its ongoing collaboration with Airbus Helicopters, now supporting specialized single-part repair work across additional Airbus platforms, including the H135 and H145.

The expanded capability further strengthens Cadorath's role as a Canadian repair partner supporting Airbus Helicopters fleet sustainment. Cadorath remains the only facility of its kind in Canada, and one of only a select number of partners globally, authorized to perform single-part repair on core gearbox components.

This continued development supports the repair and sustainment of critical helicopter components, helping operators improve component availability, extend service life, and maintain fleet readiness across multiple Airbus Helicopters platforms.

"Expanding our Airbus Helicopters repair capabilities to include H135 and H145 support is an important step forward for Cadorath and for our customers," said Rodney Kucheran, Senior Director, Business Development at Cadorath. "This reflects the confidence Airbus Helicopters has placed in our technical expertise, our quality systems, and our ability to deliver specialized repair solutions that support aircraft availability and long-term fleet performance."

The growth of this work also supports Canada's broader aerospace and defence objectives, including Industrial and Technological Benefits priorities and increased Indigenous participation within the sector. By continuing to invest in Canadian capability, technical expertise, and long-term industrial partnerships, Cadorath is helping reinforce a more resilient aerospace ecosystem.

Cadorath's advanced aerospace repair capabilities are part of the company's broader commitment to delivering practical, high-quality solutions for aviation, defence, industrial, mining, agriculture, and commercial customers across North America and around the world.
